Teaching + Learning

- Algebra Colloquium

<https://www.mff.cuni.cz/en/math/ka/events/seminars/algebra-colloquium>

Algebra colloquium

It takes place on **Tuesdays 15:40 at K1**. We start on February 28.

Information

Algebra colloquia are designed for master's and doctoral students, and the faculty. The aim is to offer a platform for researchers to present their own results or current trends in their area of interest in a way that is easy to understand for non-experts.

Colloquia talks will have 45 minutes and will be followed by questions and informal discussions (and cookies :)). **Everyone is most welcome to attend, including people from other departments.** The colloquium is co-organized by [Zuzka](#) and [Michael](#). If you want to give a talk, please, let one of us know.

Please note that a colloquium talk should be much more accessible than a usual seminar talk. If we asked you to give a talk, please at least read the brief information given [here](#) (of course, their specific local information, e.g. about talk length, doesn't apply :)). If you want, a little longer guide to read is [here](#). We do try to keep our colloquia accessible to students, so feel free to discuss your plans for the talk with us in advance, we're happy to help you gauge the correct level for the talk. But also, please don't be surprised or offended if we ask you to make changes to your abstract after you send it to us.

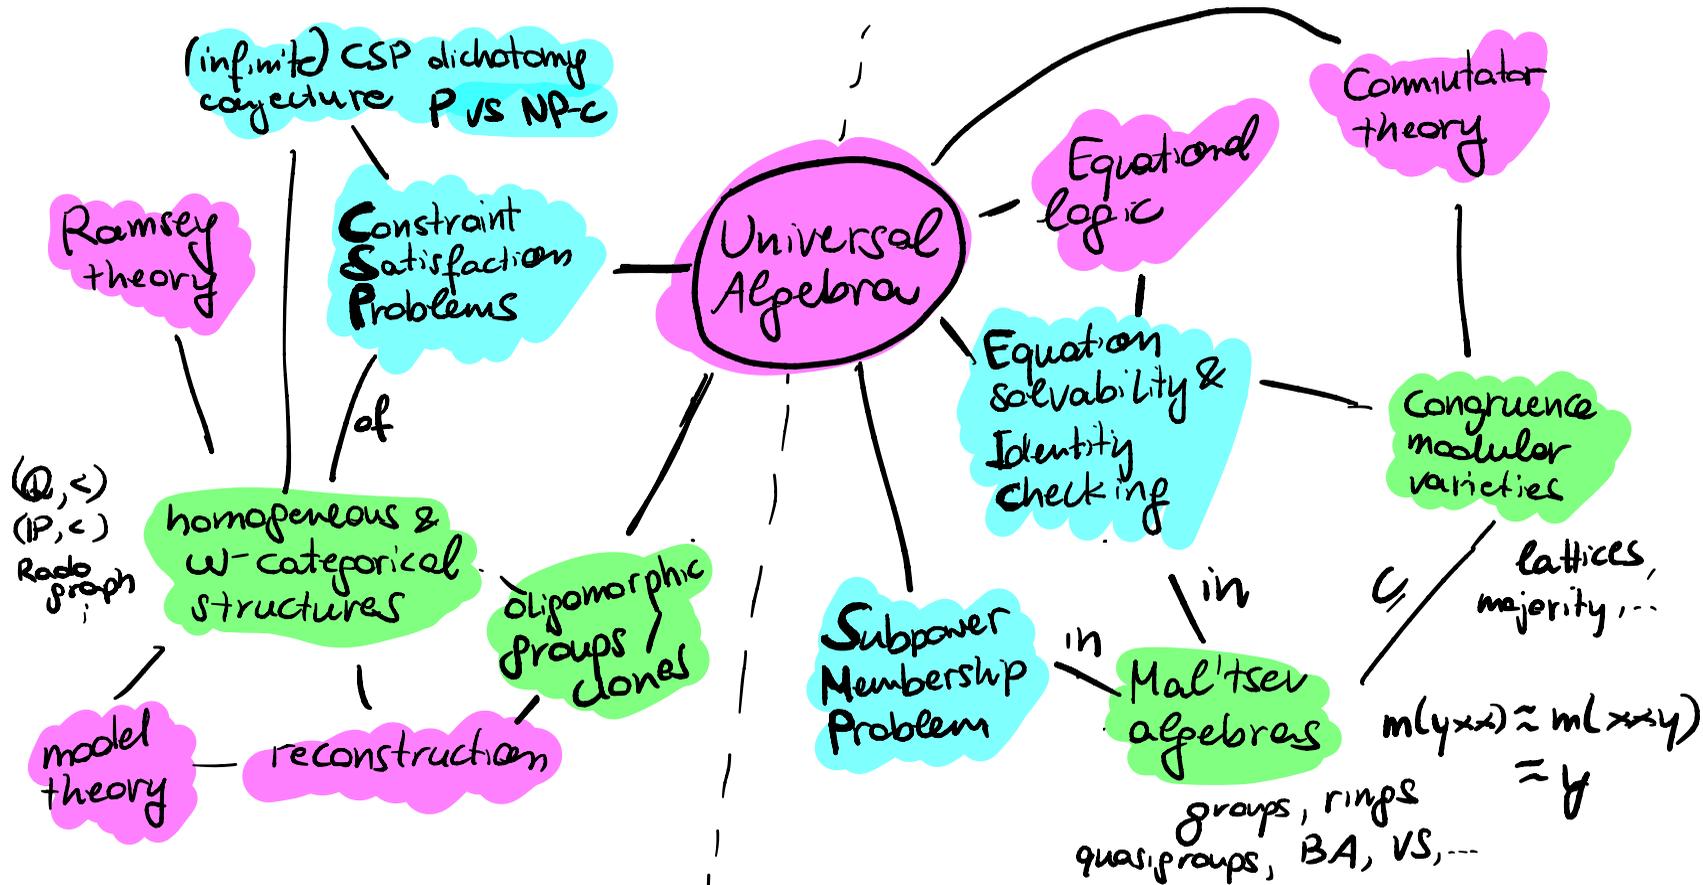

Spring semester 2023

- 28. 02. Jaroslav Nešetřil: [Ramsey Theory, Sparsity and Limits](#)
- 07. 03. Siu Hang Man: [The partition function and Ramanujan's congruences](#)
- 14. 03. Manuel Bodirsky (TU Dresden): [Valued Constraint Satisfaction Problems and Resilience in Database Theory](#)
- 21. 03. David Cerna (Academy of Sciences): [Anti-unification: Recent Results and How is it Used](#)
- 28. 03. Nicolas Daans: [Hilbert's 10th Problem and decidability in number theory](#)
- 04. 04. Štěpán Holub: [What is it like to code mathematics \(in Isabelle/HOL\)](#)
- 11. 04. Michal Hrbek (Academy of sciences)
- 18. 04. Stefano Pozza
- 25. 04. Ian Wanless (Monash university, Australia): [Quadratic Latin squares and quasigroups](#)

Zuzka Patáková

Research interests

Some facts about $\mathbb{Z}_p = (\{0, 1, \dots, p-1\}, +, -, \cdot)$

1) Checking identities in \mathbb{Z}_p , e.g.

$$x_1 + x_3 - x_1 + 2 + x_2 \approx 1? \text{ is } \underline{\text{easy}}$$

[rewrite terms to
NF $\sum a_i x_i + c$
 $\rightarrow \in P$

2) Checking $\bar{b} \in \langle \bar{a}_1, \bar{a}_2, \dots, \bar{a}_n \rangle?$ is easy
for $\bar{b}, \bar{a}_1, \bar{a}_2, \dots, \bar{a}_n \in \mathbb{Z}_p^*$

[Gauss
elimination
 $\rightarrow \in P$

3) Every $R \subseteq \mathbb{Z}_p^k$ has a short (pp-) definition

$$R(x_1, x_2, \dots, x_k) \Leftrightarrow \exists y_1, \dots, y_m \underbrace{R_1(x_1, y_1) \wedge R_2(y_1, x_2, y_2) \wedge \dots}_{\subseteq \text{poly}(k)}$$

with $R_i \subseteq \mathbb{Z}_p^3$

Can we generalize this to finite
Mal'tsev algebras?

$$m(yxx) \approx m(xxy) \approx y$$

rings, vs, modules, BA, ...	$m(xyz) = x - y + z$
groups	$m(xyz) = x y^{-1} z$
loops	$m(xyz) = (x/y) \cdot z$
minority	$m(xyz) = \min(xyz)$

Some questions about $\underline{A} = (A, f_1, \dots, f_n)$

1) How hard is it to check identities in \underline{A} ?

$$f_2(f_1(x_1, f_1(x_2, x_1))) \approx f_3(a, x_1, x_2) \quad [K'18]$$

👁 sensitive to encoding of terms; best by circuits

For Mal'tsev algebras \underline{A} : conditional results!

super-nilpotent	2-nilpotent	nilpotent of FL K	non-nilpotent
P [AM'10]	P [KKK'18]	$\leq 2^{(log n)^c}$ [K'22] $\geq 2^{(log n)^{F-1}}$ [K'21]	CoNP-complete [K'18]

Some questions about $\underline{A} = (A, f_1, \dots, f_n)$

2) $SMP(\underline{A})$ How hard is it to check if $\bar{b} \in \text{Sg}_{\underline{A}^k}(\bar{a}_1, \bar{a}_2, \dots, \bar{a}_n)$?

for general $\underline{A} \rightsquigarrow SMP(\underline{A}) \in EXPTIME$

for \underline{A} Mal'tsev $\rightsquigarrow SMP(\underline{A}) \in NP$.

is $SMP(\underline{A}) \in P$?

3) For which \underline{A} do relations $R \subseteq A^k$ have short PP-definitions?

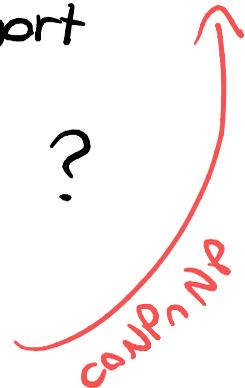

$$R(\bar{x}) \Leftrightarrow \exists y_1 \dots y_m R_{i_1}(\dots) \wedge R_{i_2}(\dots) \wedge \dots ?$$

for \underline{A} Mal'tsev
(or cube terms)

--- partial
results

Kuba Bulin

Thanks for
your attention!

Any questions?
