

0.8.

Plocha kom kosa může

$$j \frac{1}{2} \pi L^2 + 2 \cdot S$$

S pomocí formule pomocí integrálu, formule

$$\int c_x c_y' dt$$

parametrizace  $c_1(t) = (a, t) \quad t \in [0, L]$

$$i_1 = \int_0^L c_1(x) \cdot c_1'(y) dt = \int_0^L a \cdot 1 dt = a \cdot L$$

parametrizace  $c_2(t) = a(\cos t, \sin t) \quad t \in (0, \frac{L}{a})$

musíme brát S -

$$i_2 = - \int_0^{\frac{L}{a}} (a \cdot \cos t) (a \cdot \cos t) dt = - \frac{aL}{2} - \frac{1}{4} a^2 \sin\left(\frac{2L}{a}\right)$$

$$c_3(t) = c_2(t) + (-\sin t, \cos t) \cdot (L - a \cdot t) =$$

tečnuj velkou ke konvici

zbylo dleho

$$= (a \cdot \cos t - (L - a \cdot t) \sin t, a \cdot \sin t + (L - a \cdot t) \cos t)$$

$$i_3 = \int_0^{\frac{L}{a}} c_{3x} \cdot c_{3y}' dt = \int_0^{\frac{L}{a}} (a \cdot \cos t - (L - a \cdot t) \sin t) (a \cdot \cos t - (L - a \cdot t) \sin t - a \cos t) dt = - \frac{aL}{2} + \frac{1}{4} a^2 \sin\left(\frac{2L}{a}\right) + \frac{L^3}{6a}$$

$$i_1 + i_2 + i_3 = \frac{L^3}{6a}$$

Plocha pro kterou j

$$\left( \frac{\pi L^2}{2} + \frac{L^3}{3a} \right)$$
